

Session 22 – Paediatrics for the General Intensivist

10th July

Friday 2pm QMC AICU seminar room

Each talk should be short and sharp – 10-15mins only

- 1. You have been asked to review a six week old infant in the emergency department with a presumptive diagnosis of bronchiolitis.
 - a. Outline your approach to the assessment, and**
 - b. Management of this baby. Mark S****

- 2. List the ways the paediatric airway differs from the adult airway. Outline how these influence your management. Sarah**

- 3. Outline the typical history, symptoms and signs of Steven-Johnson syndrome in children. Outline your management. Ausim**

- 4. Outline the typical history, symptoms and signs of Haemolytic Uraemic Syndrome in children. Outline your management. How does it contrast to TTP? Vicky**

- 5. Outline the circulatory and respiratory changes that occur after birth. List the classic cardiac auscultatory signs of atrial septal defect, ventricular septal defect and patent ductus arteriosus. What typical findings on a right heart catheterisation will also support your diagnosis? A table would be ideal. Adam**

- 6. Outline the difficulties of diagnosing brain stem death in very young children. Gary**

- 7. Outline the differences in management of multi-trauma occurring in a six year old child, compared with management of multi-trauma occurring in an adult. Dan**

- 8. Outline any differences in ventilation strategies in children compared to adults Simon**
